

Have you ever wondered how **YOU** can further customize your Salesforce Org without the need for external support?

Cirrius Solutions now offers a Complete Flow Course that will guide you in the next steps of your low-code learning journey. Flow is the future of low-code automation. In this Complete Flow course, you will learn how to automate business processes and repetitive tasks using business logic.

This course consists of a 6 week long bootcamp program with weekly training sessions and dedicated time for office hours and Q&A. The curriculum is designed to cover the different types of flows, loops, collections, assignments, scheduled triggered and event triggered flows, best practices, order of operations, limitations, and more.

Regardless of how technical you are, you will benefit from this course and complement your skills with another toolset in addition to your Admin or Developer skills.

Why is it essential to learn Flow now?

Salesforce announced the retirement of Workflow Rule Builder and Process Builder. Salesforce accelerated the development of Flow features and recommended this tool as the single low-code automation tool for the future.

Register for this course now to upskill and prepare for this transition!

6 weeks | Weekly classes and office hours
